# Samples collection and analyses

- Ten samples were sampled in the green house.
- Samples were analysed using nine OIV recommended microsatellite markers:
  - VVS2, VrZAG62, VrZAG79, VVMD5, VVMD7, VVMD25, VVMD32, VVMD27, VVMD28.
- According to the results of the analyses, it could be concluded that 4 samples: **Vinje 1**, **Vinje 2**, **Vinje 11** and **Vinje 15**, belong to the group of *V. sylvestris*.

# Collection maintenance and plans for the future work

- Vines are potted in the greenhouse in STS Vrhpolje.
- The samples will be analysed using additional microsatellite markers.
- Additional, for those 4 samples: **Vinje 1, Vinje 2, Vinje 11** and **Vinje 15** morphological descriptors will be evaluated.

## Acknowledgment

- Korošec Koruza Z., Koruza B., Vozlič Suštar J., Z. Luthar, T. Cesar, N. Štajner .
- For the financial support to the Slovenian Research and Innovation Agency (ARIS) and to Ministry of Agriculture, Forestry and Food.

THANK YOU
